

Building your own modules

Building your own modules

- ▶ Create a .py file
- ▶ Put some functions in it
- ▶ You're done!

What should go in a module?

- ▶ Groups of logically related functions
- ▶ Things that will tend to be used together in the future

Changing the working directory

- ▶ Python modules are located in Python's directories
- ▶ You often won't put your modules there
- ▶ Changing the working directory in Python

```
import os
```

```
os.chdir('C:\Path\To\Modules')
```

```
os.chdir('C:\Users\Ethan\Desktop')
```

- ▶ Changing the working directory in Wing
- ▶ File > Preferences > Files
